

Squint Surgery for Adults

An information guide

Squint Surgery for Adults

This leaflet aims to answer any questions you may have in relation to the operation.

Why do I need surgery?

You have a muscle imbalance that has resulted in one of your eyes turning in, out, up or down. The consultant has now decided that you would benefit from an operation to correct the imbalance and you have been added to the waiting list for surgery.

When will I have the operation?

The waiting time for this surgery varies between consultants. An approximate waiting time should have been given to you when you were added to the waiting list.

Shortly before your admission you will be sent an appointment for pre-operative assessment and/or orthoptic assessment. This is an opportunity for you to ask any questions and for the nursing staff to collect details from you. This is to ensure you are in good health for the anaesthetic which will be discussed with you.

You will also be shown how to use eye drops/ointment in pre-op assessment/ward area prior to your surgery.

How long will I be in hospital?

All squint surgery is done as a day case. If your general health changes before the operation you must visit your GP. If your GP thinks that you are not fit for surgery or you have any queries, you must contact the eye unit immediately.

What does the operation involve?

Squint surgery is the repositioning of the eye muscles. This involves making a small incision in the tissue covering the eye, which allows the surgeon to access the underlying muscles.

It is important to note that unlike in children, your visual development is complete. Consequently the surgery will not improve your vision.

Possible risks from surgery

- Under/over correction - possible
- Infection - rare
- Bleeding - rare
- Further surgery may be required - possible.

After the operation

You should be fit enough to return to work 1 to 2 weeks after the surgery. Please ask for advice from the ward if you are concerned.

You should avoid situations where there is a risk of getting something in your eye, i.e. grit. Avoid getting the eye wet, bathe rather than shower and be careful when washing hair. Avoid swimming for 4 weeks after the operation.

You will be given drops/ointment to put in for two weeks after the operation to reduce the risk of infection and inflammation.

You will be sent an appointment to be seen in clinic by the doctor and the orthoptist. This will be approximately two weeks after your operation.

Please note:

This information is given in conjunction with verbal explanations from the nursing staff.

Contact Numbers

The Royal Oldham Hospital, Oldham

A&E Department - 0161 627 8933

Friday 5pm until Monday 9am

Oldham Integrated Care Centre Eye Clinic -0161 621 3721
